

Heuristic Analysis

As it can be seen in the previous chart of the times for each of the searches, there are 3 of them that can't be consider because of the amount of time it took to run such simple problems. Breath First Tree Search,

Depth Limited Search and Recursive Best First Search took too long and we do not have information.

It is also clear that the results

are comparable between problem 2 and problem 3, with the consideration that problem 3 is a bit more complex. However Uniform Cost Search ran the longest time of all non-heuristic tests performed, and A* Search h_pg_levelsum of the heuristic ones.

As for the plan length, all show about the same results with the exception of Depth First Graph Search, making this algorithm not the most optimal solution.

In my estimation, Uniform Cost Search is probably the best solution of the non-heuristic options because it seems to have a good combination of time, plan length.

From the heuristic we noticed that time wise and al measures in general A* and A* Ignore Preconditions, came up with very similar results.

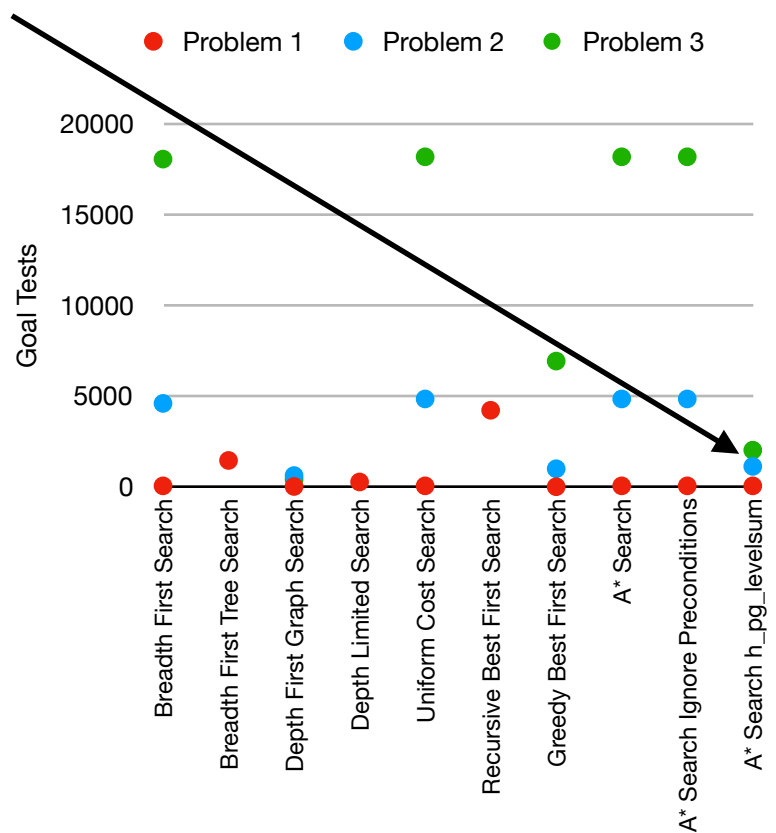

Results show that A* with levelsum gets the better results, yet the time it takes to compute the solution is extremely large. It took little over 10 min to find the solution of problem 2 and little over 34 min to solve problem 3.

Time to run this algorithm takes so much time, that it almost makes the time to run any other one almost neglectable.

I guess depending on the computer power, and available time, A* levelsum is the best option, but the other two would do a good job in a much shorter time.

All of these results are on line to what is to be expected according to the information in chapter 10 of the book Artificial Intelligence: A Modern Approach.

Russell, S, and P Norvig. Artificial Intelligence: A Modern Approach, Chapter 10: Classical Planning

PROBLEM 1

	# Node Expansions	# Goal Tests	Plan Length	Time Elapsed
Breadth First Search	43	56	6	0.03249082202091813
Breadth First Tree Search	1458	1459	6	0.9363851730013266
